

# Parallels® Plesk Billing

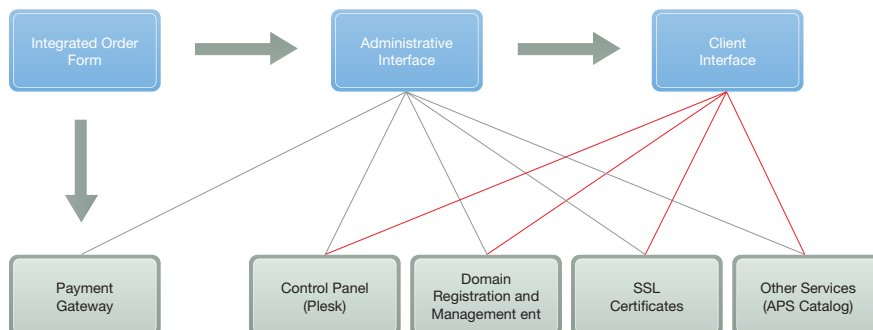

## Datasheet

## Parallels Plesk Billing is a Seamless Billing and Order Automation Solution for use with Parallels Plesk and other Control Panel software.

### Parallels Plesk Control Panel and Parallels Plesk Billing offer a complete shared hosting solution with easy access to applications

Key to the success of any service provider is their ability to deploy services and applications automatically based on their successful payment and fraud verification rules. Typically, quality solutions are priced out of the reach of many resellers and service providers. Parallels Plesk Control Panel with Parallels Plesk Billing is an affordable solution that any service provider can get started with.

Already powering more than 15,000 service providers, Parallels Plesk Billing integrates and automates the delivery of most services being offered currently. These include control panel integration for shared web hosting accounts, domain name registration and management, SSL Certificate purchases and many other services that will be made available through the APS catalog. Parallels Plesk Billing ties these service delivery events to successful payments and can also suspend and re-enable these customers based on payment.

### Automated Your Way

Parallels Plesk Billing allows you to be as fully automated as your business rules dictate. Our fraud verification procedures allow you to automate the orders that you are comfortable with and put the rest in a queue to be scrutinized by your order fulfillment team. The best customers are the ones who purchased your service, received it automatically, enjoyed it thoroughly and never created a support request.

### Customers Love Self Service

Parallels Plesk Billing comes with a client interface that allows customers to perform most account management functions themselves. They can view all of their invoice and payment history, pay outstanding invoices, and update contact and credit card information. Customers can also view their service plans, purchase add-ons or upgrades, and even manage services like domain names and SSL Certificates.

### Parallels Plesk Billing Bundle

Purchase Parallels Plesk Billing in a bundle with your Parallels Plesk control panel.

### Save Money

When purchased as a bundle, Parallels Plesk Billing is offered at a significant discount.

### Easy Installation

Your Parallels Plesk Billing Bundle will be installed automatically for you during the deployment of the Parallels Plesk Control Panel. As it is designed for this purpose, you will not encounter server configuration issues.

### Easy Setup

Once installed, the setup wizard will guide you through the initial configuration of your system. Because the system is already aware of your server environment, it can shorten your setup time by inserting information it already has.

### Highly Integrated

Both clients and administrators will be able to move quickly and easily between the control panel and billing system. Parallels Plesk Billing has been themed to match the Parallels Plesk Control Panel for familiarity and ease of use.

### Supports Multiple Servers

Whether the Parallels Plesk Billing Bundle is on your first server or just the next one you are getting, it has the ability to handle your growth needs. The billing system will not only integrate with the server it is on but it will also integrate with the rest of the servers you have. When used with other Parallels Plesk servers, the billing system can perform some basic account balancing across multiple servers to ensure uniform deployment.

## Types of Integrations

Parallels Plesk Billing supports integration with many types of third party systems. Parallels Plesk Billing pulls together and automates all of the facets of your service based business.

### Payment Gateways

Parallels Plesk Billing supports a variety of payment gateways out of the box. You add your account credentials and the system can handle authorizations, captures, voids, and refunds. Parallels Plesk Billing also supports a variety of nonstandard gateways like Paypal and Worldpay.

### Control Panel Integration

While our most complete integration is with the Parallels Plesk products, the system will also integrate with a variety of other control panels simultaneously for the ultimate in flexibility.

### Domain Name Registration

Parallels Plesk Billing supports integration to a variety of registrars simultaneously to support the maximum number of domain name types. Many registrar integrations also include support for domain management from the client and administrative interfaces.
